

The Children's Future Thinking Questionnaire (CFTQ)

What is the CFTQ?

The CFTQ is a **valid, reliable, and free parent-report questionnaire** used to measure five key domains of 3- to 7-year-old children's future-oriented cognition including:

- ▶ Planning
- ▶ Remember to do something in the future (i.e., prospective memory)
- ▶ Saving Behaviour
- ▶ Delay of gratification
- ▶ Episodic future thinking.

childrens-future-thinking-
questionnaire.html](https://www.brockdmclab.com/the-childrens-future-thinking-questionnaire.html)

More information about the development of the questionnaire can be found in:

Mazachowsky, T. R., & Mahy, C. E. V. (2020). Construction of the children's future thinking questionnaire: A reliable and valid parent-report measure of children's future-oriented cognition. *Developmental Psychology*.

How is it Administered?

The CFTQ can be completed in person or online. It is comprised of **44 items** (approximately 9 items from each of the five domains) and takes parents **10-15 minutes to complete.**

How can I use the CFTQ in my research?

The CFTQ captures **developmental change** in children's future oriented cognition overall. The planning, saving behaviour, delay of gratification, and episodic future thinking subscales could be used independently as they show highly validity.
